Crops for the Future

The world's population is growing at an explosive rate. The deserts and other arid zones of the Earth are expanding. At the beginning of the 21st century there are more than 6 billion people on our Earth – 6 billion mouths to feed. At present, the industrial nations provide Third World countries with regular food aid. In the long run, this approach will not be viable. One way out of the dilemma could be increased utilization of local food resources.

- 01 Babassu – Fat Reserves in the Tropical Jungle
